

Mrs Benson's Science Challenge!

As we enter our next whole school project of 'The world around us!' I thought this would be a great opportunity for a science based challenge!

I would like you to design and or make something for your environment that would attract wildlife. It can be as simple as a cheerio bird feeder which you can hang out your window or a bug hotel made out of old wood and bricks.

This video shows you some of the animals that you might see in your local area.

I have attached some photos to get your ideas flowing and also some weblinks for some step by step guides if you would like to follow some instructions. If you haven't got the materials, don't worry just draw your design on paper and label it or write how it would help to attract wildlife.
